Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 10, drawn to a nucleic acid, a host cell containing the nucleic acid and a method of making a polypeptide using the host cell, classified in class 435, subclass 189, 252.3 and class 536, subclass 23.2.
- II. Claims 8-9, drawn to a polypeptide, classified in class 435, subclass 189.

The inventions are distinct, each from the other because:

The products of Groups I and II are completely different chemical compounds that are patentably distinct. The enzyme of Group II could be obtained from the natural source, not involving cloning of the gene.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
